

Are you ready to lead your team into the future?

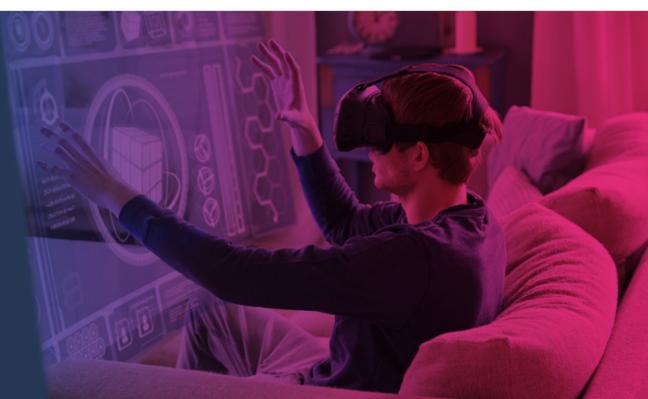

SingularityU South Africa
Executive Programme
ONLINE

18 - 21
May 2021

As humans, we have evolved in a world of predictable, linear change.

Our intuition tells us to use our past experience to predict how much change we'll see going forward. But in this age of rapidly accelerating change that has been created by exponential technologies, our linear thinking causes us to make flawed decisions. During the Virtual Executive Programme you will learn to see the world differently and to think exponentially, which is vital to discovering new opportunities, building innovative solutions, and more accurately assessing the future.

The **SingularityU South Africa Virtual Executive Programme** is an exclusive, **three and a half day** virtual leadership program for executives and top influencers who want to become Future Leaders and create the future driven by exponential growth.

Examine emerging technologies, tools, skill sets and concepts such as innovation, disruption and future forecasting to lead your organisations today

WHO SHOULD ATTEND

A corporate or government executive leading transformation or disruption in their organisation

Owners, executives and innovation leaders of SMEs who want to shape their companies using accelerating technologies

Innovators and entrepreneurs who want to prepare for a future that looks nothing like the past

DAY 1: Reframing your Perspective

This programme begins with an overview of the exponential technologies and global grand challenges that are driving our future, such as artificial intelligence, robotics and leadership. We examine core SingularityU frameworks such as the 6Ds of digitisation and the various layers of converging tech, and how you can use them to shift your mindset and achieve maximum impact.

DAY 2: Scanning the Horizon

We will learn about various exponential technologies and how we can make Africa exponential. The focus is on Moonshot thinking and the impacts on our society. We'll also explore ethical consideration about how we apply technology in the future and manage the impact on society.

DAY 3: Forecasting and Planning your Future

Today we look at the future of work and what it means to reach our full potential and the role each of us must play in creating the future. We will dive deep into how to transform legacy organisations and innovate on the edges. You will leave with an action and support plan, identifying opportunities for the SU community to assist with achieving your goals.

We'll provide you with a set of proven tools for integrating these technologies and nimble innovation practises into your organisation:

We'll discuss the role of the four fundamental human motivations, share the best practices from exponential organisations, and review the design principles of innovation in legacy organisations.

We'll also explain how to apply the 6Ds of technology to explore potential innovations and how to apply moon-shot thinking to create 10x solutions that can have a massive impact.

TOPICS TO BE COVERED

EXPONENTIAL TECHNOLOGY:

Artificial Intelligence
Robotics
Biotech and Medtech
IoT
Blockchain and Crypto
Virtual and Augmented Reality
3D Printing

MINDSET:

Exponential Thinking
Global Grand Challenges
Future of Human Potential
Future of Work
Mindfulness and Meditation
Longevity and Space
Education

WORKSHOPS:

Disruption and 6 D's
Future Wheels
Moonshot Marketplace
Exponential Ethics
Corporate Innovation
Exponential Actions
